Complete Service of Power Transformers and Load tap Changers including Testing, Start-up and Commissioning, Maintenance, Repair, Dehydration, Upgrades, Diagnostic Work and Changeouts. No Job Too Large or Too Small – We service from small Low Voltage Padmounts to 765 KV Power Transformers.

- Oil Testing / Analysis / Processing
- Full Haul, Rig, Set, Assemble, and Vacuum Fill Capabilities
- Power Factor Testing – Windings & Bushings
- Transformer Turns Ratio TTR
- Sweep Frequency Response Analysis – SFRA
- CT Test – Ratio, Polarity, Saturation
- Induced High Voltage
- Impedance Test
- Winding Resistance, Excitation, Insulation
- Load Tap Changer Service & Repair
- Acoustic/Ultrasonic Detection of Partial Discharge
- Bushing Replacements
- Fuller's earth Oil Reconditioning
- Retrofit Old LTC with New Vacuum-Arcing LTC
- Leak Repairs / Regasketing
- Gauge and Meter Repair/Replacement
- Hot Oil Treatment
- D-Sludging
- Dehydration / Degassing
- Repair to Original Specifications
- PCB Changeouts
- Fault Analysis
- Pressure Clamping
- Dissolved Gas Analysis
- Valves Repaired and Added
- Infrared Scanning
- Fluid Retrofills – Biodegradable
- Transformer Cleaning and Painting
- Maintenance Agreements
- Increased Capacity – Added Fans, Cooling
- Increased Cooling – Added Circulation Pump/Filters
- Control Upgrades and Communications Added
- Online System Monitoring and Control
- Transformer Painting and Encapsulation
